Project Description	Residential
Value	\$94, 752, 505
Delivery System	Design and Construct
Completion Date	January 2008
Team Leader	Paul Hart

Details

This early works contract in preparation for a residential development included the necessary infrastructure, roads and environmental work prior to a 149 unit development starting. Wetlands separation, sewerage pump stations, transformers, stormwater drainage and water mains were all included. From the upper side of the site natural springs continuously ran water across the site. Strict environment controls has produced a fantastic outcome and utilisation of the natural spring water. Early works including; trapping the water, running it into tanks and either using the water for irrigation or running the overflow into nearby wetlands. Access in and out was always under strict Noosa Shire Council guidelines. For environmental purposes all trucks had to cross a grid, were washed and inspected before they left site.
